PURPOSE: An armrest of a rear seat for an audio remote controller is provided to firmly install the remote controller on an upper part of an armrest cover and to conveniently store and keep the armrest of the rear seat.

CONSTITUTION: An audio remote control(18) is installed in an armrest(16) of a rear seat. A storage groove(26) is formed on an upper part of an armrest cover(22) drawn out toward a cushion seat in the center of a backrest seat. The armrest consists of a stop projection(24) and an appearing/disappearing tool(28) installed on front and rear parts of the storage groove. Herein, the armrest is put on the cushion seat by rotating around a hinge member. The remote control is combined with the storage groove by vertically giving force. A front end of the remote control is fixed by the stop projection. A rear end is supported by the appearing/disappearing tool so that the remote control is more firmly fixed in the storage groove. A user manipulates the remote control without displacement and movement. Accordingly, a storage state is firmly kept by the stop projection and the appearing/disappearing tool.
